

AI WORKSHOP

Before we build.

IT IS THE CONTEXT.

It is not the AI, it is the context. A short conversation before we open the workspace and set up yours.

PART ONE

Where we start.

THE PROBLEM.

THE STORY

It's not you.

EVERY CONVERSATION

STARTS AT ZERO.

you're

not
alone.

You sit down to work. You open the AI and start re-explaining who you are and what you are doing, because it has no memory of you. Ten minutes later you finally get help, and it is generic.

Three at a glance.

THE WORDS.

01

TERM

AI vs LLM

AI is the field. An LLM is the text-trained model we actually use.

02

TERM

Chatbot vs Agent

A chatbot replies. An agent takes steps and uses tools for you.

03

TERM

The Workspace

A prompt is what you ask. A workspace is your context and skills, saved and reused.

“ *The fix was not a smarter prompt.*

It was context
the AI already had.

— ASHLEY SCRUSE

THE PAYOFF

Fill it once.

EVERY GRANT.

You set up your context one time. From then on every evaluation and every draft reads from it, so you never start from zero again.

Good habits.

DO THIS, NOT THAT.

Do this

- Give it your context first.
- Be specific about the goal.
- Ground every claim in a source.
- Verify before it goes out.

Not this

- × Paste a cold question.
- × Trust an unverified citation.
- × Let it invent data or numbers.
- × Ship without checking it.

TOKENS & COST

Say it once.

CONTEXT SAVES

MONEY.

You pay per token, the pieces of text the AI reads and writes. Good context means you say things once instead of every time, which is less work for the model and less money for you.

Your turn.

LET'S BUILD IT.

Context in, grounded help out. Now we open the workspace and set up yours.
