

the one thing that matters

CONTEXT MATTERS.

It is not the AI. It is what the AI knows about you.

THE PROBLEM

here's the trap

**MOST SETUPS DON'T
KEEP UP WITH YOU.**

The web can hold some context: projects, uploaded PDFs. But it is a snapshot you keep up by hand, and it goes stale. A file-aware setup reads your real, current files every single time.

SAME PAGE

learn three words

THE WORDS.

01

CONTEXT

What the AI can see right now:
your prompt, your files, the
chat so far.

02

MEMORY

It forgets between sessions.
Your files are what give it
memory.

03

PROMPT

How you ask. Clear, specific
requests get better answers.

where things live

WHITEBOARD vs NOTEBOOK.

THE WHITEBOARD

The session you are in. Temporary. Wiped clean when you close the window.

THE NOTEBOOK

Your files and CLAUDE.md. Permanent on disk. Reloaded onto the whiteboard every session.

this is the shift

WHAT FILE-AWARE AI MEANS.

PASTE AND COPY

You paste text into a chat and copy the answer back. It only ever sees what you paste.

FILE-AWARE

It opens your folder and reads and writes your real files, in place. It sees your whole project.

WHY IT MATTERS

the payoff

HOW THAT SPEEDS YOU UP.

No re-explaining. It already knows you, from your files.

Drafts in place. It writes into your documents, not a chat you copy from.

Stays organized. Your work lives in folders, not scattered tabs.

THE FILE-AWARE TOOL

what you'll use

MEET CLAUDE CODE.

It opens your folder. Reads and writes your files, in plain English.

You never touch code. You ask; it does the work.

It even writes the LaTeX. The formatting that keeps NSF pages compliant.

You'll use the desktop app. No coding editor required.

THE PLAN

what you'll sign up for

ABOUT CLAUDE PRO.

\$20 per month. Includes Claude Code.

Usage resets on a rolling 5-hour window, plus a weekly cap.

Good context stretches it: it reads your files instead of you re-typing.

\$20
/ month

YOUR TURN SOON

what you're getting

WHAT'S IN THE WORKSPACE.

01

PROFILE

Who you are, built from your CV. Reused on every grant.

02

GRANTS

A folder per grant: solicitation, evaluation, budget, draft.

03

SKILLS

Sage, advisor, writer, reviewers. They draft and critique for you.

A tracker keeps your whole pipeline in view.

THE LINE I WON'T CROSS

some things aren't automated

**The budget stays human.
You and your team own it.**

That is why there is no budget skill. I never build a workflow that removes the person.

HANDS ON THE KEYBOARD

your turn.

LET'S OPEN IT.

Download the desktop app and the zip. Unzip it. Open the folder in Claude Code.
Say hi.
